

Within-group variability of theoretical explanations (pre-ML v.s. post-ML)

Metric: mean(cosine distance to within-group centroid), higher = more dispersed

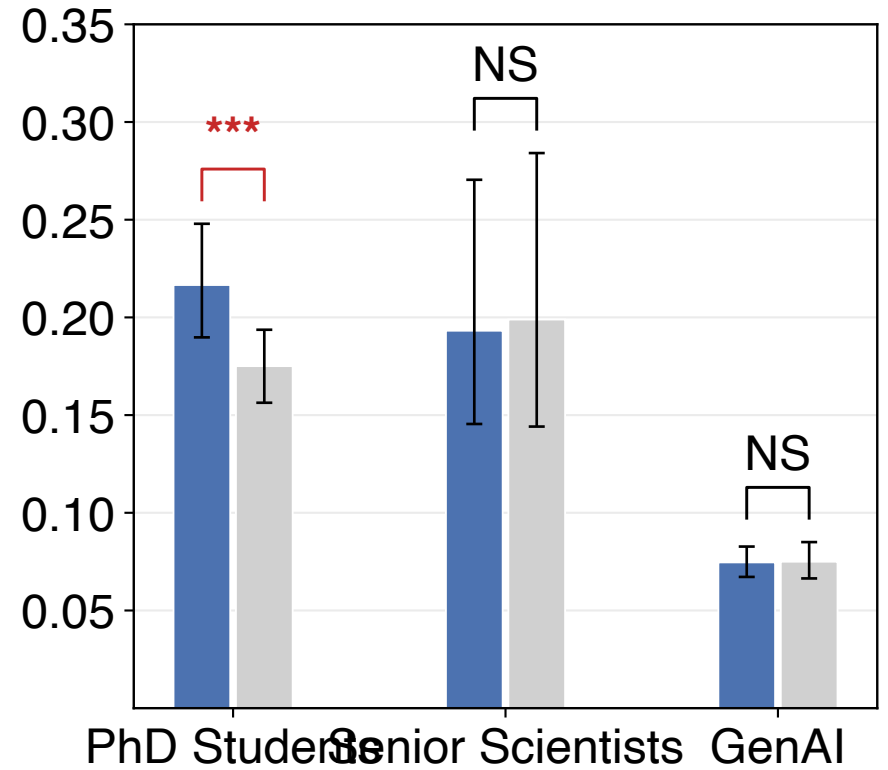

Mean cosine distance to group centroid

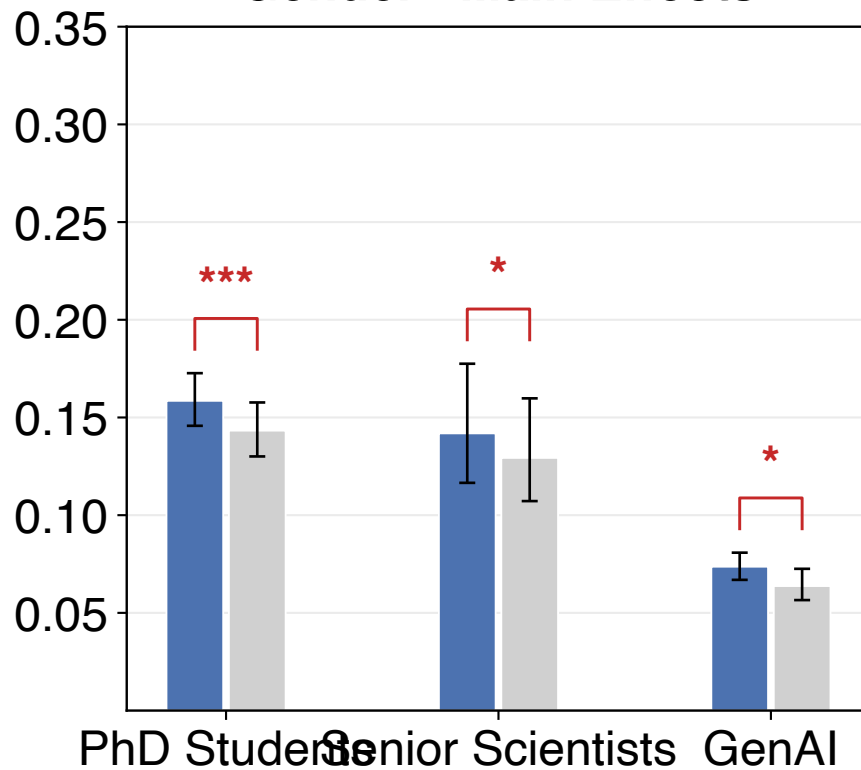

Race · Main Effects

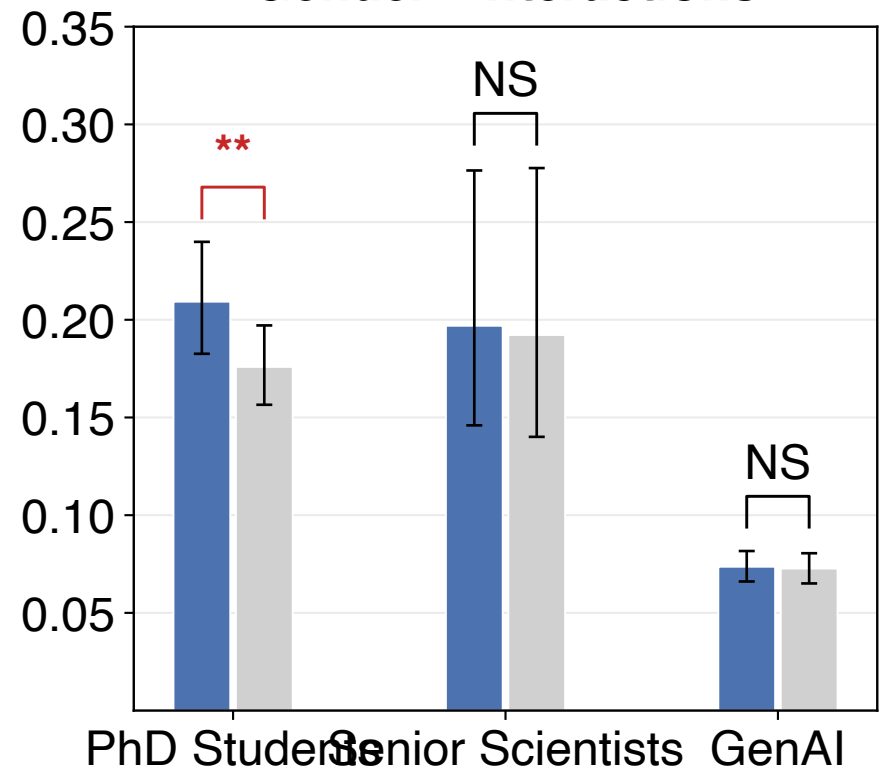

Race · Interactions

Gender · Main Effects

Gender · Interactions

Error bars: bootstrap 95% CI.
One-sided paired t-test on group mean distance (directional: post < pre).
NS ($p \geq 0.05$), * ($p < 0.05$), ** ($p < 0.01$), *** ($p < 0.001$)
